**Compact Microstrip Patch Antenna
Tuning Kit GPS L1 band**

PRODUCT DESCRIPTION

Maxtena's Microstrip Patch Antenna Tuning Kit includes 10 sample dielectric ceramic patch antennas (12mm*12mm*4mm) ranging from 1610MHZ to 1628MHZ, at 2MHZ intervals. This enables the user to find the exact antenna frequency to compensate for downward shifts caused by the devices housing construction and electronic components. All antennas are equipped with an adhesive tape on the back for easy installation on different surfaces. The MPA1575D124T will accelerate the antenna integration process.

The Microstrip Patch Antenna Tuning Kit comes in vacuum packed and waterproof robust PU packaging, which makes it easy and secure to ship our antennas worldwide.

SPECIFICATIONS

Frequency range: 1610MHZ to 1628MHZ

Intervals: $\Delta=2$ MHZ

Realized Gain: 4.8 dBic

Antenna Dimensions: 12mm*12mm*4mm

Tuning Kit Quantity: 10 Antennas

* See MPA1575D124 Datasheet for more specifications and details.
